Types of Water

Spring Water (Blue cap) Our **Spring** water comes from the Hillsburgh Ontario area. We haul it in by stainless steel tanker truck and store it in stainless steel tanks. From the tanks, it passes through a fine filter to remove any sediment it may contain. The water is then ozonated and after that passes through a finer filter before going to the bottling machine for fill. **Spring** water has the minerals you want in it and contains no chlorine or added chemicals. **Spring** water has a full natural mineral taste that you will enjoy.

Steam Distilled (Green cap) **Distilled** water is manufactured on site. We take our **Reverse Osmosis** Water and soften it to less than one part per million (ppm) hardness. The water is then diverted to our Aqua-Chem steam distillers where the water is then produced at less than one ppm Total Dissolved Solids (TDS). We remove all the minerals from the water leaving the purest form of water which is H₂O. The **Distilled** water is diverted to the ozonator and passes through a fine filter before going to the bottling machine for fill.

Reverse Osmosis (Red cap) Our **RO** water is manufactured on site. We take local well water and soften it. The water is then diverted to our **RO** machine. Our **RO** machine is a series of membrane filters leaving behind 98.6% of the minerals. This leaves a 1.4% mineral trace in the water for a Total Dissolved Solids (TDS) of about 20 ppm. The water is then ozonated and after that passes through a finer filter before going to the bottling machine for fill. **RO** water is closer to a **Distilled** than a **Spring** but contains a small amount of minerals for a better taste.
